What are the outcomes for youth placed in group and institutional settings?

Group and institutional placements are costly on many levels. They generally produce poorer outcomes for youth than family-based settings, pose roadblocks to the timely achievement of permanency, and cost up to 10 times more than placement with a family. A breakthrough 2021 report focused on young people’s direct experiences of group and institutional placement concluded that these settings often fail to offer consistent caring relationships and frequently are experienced as punitive, prison-like, and traumatic.

Over the past 10 years, the child welfare field has seen a 35% reduction in the number of youth living in group and institutional placements nationwide, with decreases in nearly every state. While this is encouraging, any amount of time that a young person spends in an institutional placement is too long.

More than two-thirds (68%) of the young people in group placements are between the ages of 14 and 17, and 62% are male. Black, multiracial, and American Indian/Alaska Native youth continue to be overrepresented in group and institutional settings. Therefore, ending the need for group and institutional placements is a key strategy for reducing disproportionate harm to young people of color in the child welfare system.

While short-term, clinically indicated mental and behavioral health treatment may need to be provided in group or institutional settings, federal policy stipulates that
What are the outcomes for youth placed in group and institutional settings?

those settings be time-limited, trauma-informed, judicially reviewed, and focused on engaging the young person’s family during and after treatment, with the goal being a swift return to family and community life. For more information, see: How are some child protection agencies attending to Qualified Residential Treatment Program requirements?

The remainder of this brief summarizes research on the experiences and outcomes of youth placed in group or institutional settings, and includes resources to support jurisdictions in reducing or eliminating their reliance on these settings.

**Impacts of group or institutional placement**

All young people need consistent, nurturing adults in their lives in order to form healthy attachments and develop positive social and emotional skills. There is a role for high-quality specialized institutional treatment services — such as those offered through Qualified Residential Treatment Programs (QRTPs) or through the behavioral health system — but that role is limited, and the duration a young person spends in such settings must be short term. It is important to note that young people also can receive effective behavioral treatment in family-like settings through therapeutic foster care, wraparound services, and mobile crisis services.

Research demonstrating effectiveness of group and institutional placement on youth is limited. While modest short-term benefits have been identified in a few instances, effects do not appear to be sustained. Overall, research indicates that youth who experience group placements:

- Have higher re-entry rates after exiting to reunification than youth in other types of out-of-home care settings.
- Are almost 2.5 times more likely than their peers in foster care to become delinquent.
- Have poorer educational outcomes than youth in family foster care, including lower test scores in basic English and math.
- Are less likely to graduate high school, when compared to youth in family foster care.
- Are at risk of physical abuse when they are placed in group settings.
- Are less likely to achieve permanency than those raised in non-relative foster families.
- Lack opportunities to develop critical life skills and positive relationships.
- Experience group or institutional placements as prison-like, punitive and traumatic.

Alternatively, according to an extensive research review, when compared to children and youth who have been placed in group or institutional settings, those placed in family foster homes:

- Have fewer placements.
- Spend less time in out-of-home care.
- Are less likely to be re-abused.
- Are more likely to be placed near their community of origin.
- Are more likely to be placed with their siblings.

**Research that supports ending the need for group placement**

The following research underscores the negative impacts of group and institutional placements:

What are the outcomes for youth placed in group and institutional settings?

**RESEARCH**

**DESCRIPTION**

This report describes therapeutic (treatment) foster care, and compares it to traditional foster care and residential treatment (p. 2).

**DESCRIPTION**

This consensus statement of a group of internationally recognized researchers provides 10 reasons why group and institutional settings can be detrimental to the well-being of young people, and includes the research base for each.

| State Policy Advocacy and Reform Center. (2013). [Therapeutic Foster Care: Exceptional Care for Complex, Trauma-Impacted Youth in Foster Care](#) |

**DESCRIPTION**

This formative report looks at four outcome areas for youth in group or institutional settings: safety and well-being; permanency/re-entry; long-term successes of children; and costs of out-of-home care. It includes an insightful comparison of how young people in different out-of-home care settings perceive their care (p. 4).

**DESCRIPTION**

This report describes therapeutic (treatment) foster care, and compares it to traditional foster care and residential treatment (p. 2).

**Guides and strategies for action**

The following resources offer strategies for child welfare leaders interested in reducing their reliance on group and institutional placements. For a detailed overview of strategies and jurisdictional examples, please see [Ending the Need for Group Placements](#), as well as Casey Family Programs briefs focused on efforts to reduce or eliminate group and institutional placements in New Jersey, Virginia, and Santa Clara County, Calif.

#### DESCRIPTION

This literature review highlights a range of alternative strategies to group and institutional placements, including: evidence-based behavioral health interventions; services and supports for home-based caregivers; foster family recruitment, support, and retention; treatment foster care; time-limited placements; and systems reform.

This report explores key levers of change that promote the rightsizing of group and institutional settings. It includes an in-depth look at how five jurisdictions used those levers of change.

---

1. Consistent with federal definitions and guidance for the Adoption and Foster Care Analysis & Reporting System (AFCARS), the term “group and institutional placements” refers to non-family based placements that house young people in large, medium, or small congregate settings, including emergency shelters, group homes, institutions, and residential treatment facilities, centers, campuses and cottages with 24-hour shift care or house parents. “Group homes” are defined as placement settings that house 12 or fewer youth, while an “institution” is defined as housing more than 12. For additional information, see: www.acf.hhs.gov/sites/default/files/documents/cb/afcars_elements_definitions.pdf and www.acf.hhs.gov/cwpm/public_html/programs/cb/laws_policies/laws/cwpm/policy_dsp.jsp?citID=150.
